

COMPLIANCE & SECURITY

Compliance built in. Not bolted on.

WHY IT MATTERS

A compliance audit in a European hospital typically spans four frameworks — HIPAA, GDPR, EHDS, and a national scheme such as ENS — each tracked in separate tools, owned by different teams, with no shared evidence trail. PHI classification gaps, incomplete consent logs, and missing audit links surface only when regulators ask.

HIPAA

PHI encryption, access logging, BAA-ready

GDPR

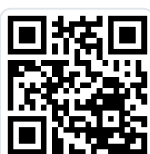

Data minimisation, consent, EU residency

EHDS

HealthDCAT-AP R5, HDAB-ready

In practice

A Spanish hospital group consolidates its PHI classification scans, GDPR consent registry, EHDS metadata catalogue, and SHA-256 audit chain into a single compliance workspace ahead of ENS High Category certification. When the auditor requests evidence, every artefact – access logs, consent records, anonymisation reports – is exported in one step with no manual assembly.

SPECIFICATION

Frameworks	HIPAA · GDPR · EHDS (HealthDCAT-AP R5)
Audit	SHA-256 cryptographic tamper detection · end-to-end
PII/PHI	Automated classification and anonymisation
Isolation	Multi-tenant organisation separation at every layer
Certifications	ENS High Category (Spain NSS) · ISO 27001 · MDR Class IIb pathway
Deployment	Cloud · On-premise · Sovereign

FIELD OUTCOMES

<h1>100%</h1> <p>Audit chain integrity</p> <p>SHA-256 cryptographic chain, end-to-end</p>	<h1>3</h1> <p>Frameworks, one platform</p> <p>HIPAA · GDPR · EHDS — natively</p>	<h1>ENS</h1> <p>High Category — certified</p> <p>National Security Scheme · Spain</p>
--	---	--

COMPLIANCE

HIPAA-READY	GDPR · EU RESIDENCY
ISO 27001	SOC 2 TYPE II — ROADMAP
WCAG AA	

INTEROP MATRIX

PHI / PII scan -> anonymisation pipeline
 HIPAA / GDPR controls -> consent management layer
 EHDS metadata -> HealthDCAT-AP R5 catalogue
 Audit events -> SHA-256 cryptographic chain
